| +40 772 252 764 | Bucharest, Romania |

SUMMARY

Full-stack developer with 3 years of experience specializing in Python, Django, and FastAPI - building REST APIs, relational database systems, and complete web applications from backend to frontend. Experienced in multi-language content platforms, ML-integrated pipelines, and cloud deployment with Docker and Render.

KEY SKILLS

- **Backend:** Python, FastAPI, Django, Django REST Framework, SQLAlchemy, Pydantic, Alembic
- **Databases:** PostgreSQL, MySQL, SQLite
- **Data & ML:** Scrapy, PyTorch, scikit-learn, Pandas, Matplotlib, Numpy
- **Frontend:** React, TypeScript, Tailwind CSS, JavaScript, Next.js, HTML/CSS
- **Deployment:** Docker, Render, Vercel, Cloudflare, AWS
- **Tools:** Git, Linux, Figma

PROJECTS

Fiesta Gastro Cafe – Full-Stack Multi-Language Restaurant Website - fiestagastro.dev -
Python · Django · DRF · React · TypeScript · PostgreSQL · Docker · Render

Complete full-stack restaurant website supporting 3 languages (RO/EN/RU) - from Django REST API to React frontend and cloud deployment.

- Built a full-stack, RESTful multi-language (RO/EN/RU) restaurant website using Python, Django, DRF, React, and TypeScript
- Built a fully admin-managed CMS enabling non-technical staff to update menu, content, and settings in under 30 seconds, cutting update turnaround from days (developer-dependent) to instant self-service
- Designed a flexible, polymorphic content model supporting 3+ section types, enabling new pages without backend changes
- Architected the system to reduce long-term maintenance costs by an estimated 70-100%, since ownership can scale from self-managed to a single low-cost trained admin as site complexity grows
- Deployed with Docker and CI/CD-ready containerization on Render; media served via Cloudflare R2 with signed URLs

---

VM.AI - AI-Powered Personal Scheduling System
Python · FastAPI · PostgreSQL · SQLAlchemy · ML Integration

Open-source AI scheduling system that converts natural language and images into personalized, behavior-aware daily schedules - designed to cut manual scheduling time significantly.

- Integrated 4 ML models (NLP parsing, image classification, task matching, duration prediction) into one backend pipeline using Python, PyTorch, and scikit-learn
- Built a behavior-learning system that personalizes scheduling to each user's habits and preferences over time
- Built a stable scheduling algorithm that automates task placement, reducing manual scheduling time by up to 4 hours/week
- Designed the PostgreSQL database schema and a RESTful 15-endpoint API layer with FastAPI and SQLAlchemy
